

High performance with a color LCD: HBC-radiomatic presents the micron 7!

Ergonomic design, premium equipment, state-of-the-art display technology: That's the new micron 7 radio controller by HBC-radiomatic! This outstanding new product enables clear display of the most diverse customized feedback information and warning messages, e. g. in case of a possible crane overload. This results in significantly enhanced safety and operating comfort!

In addition, the operator can enter and store informational texts (e. g. crane number), which can be easily transferred and displayed to a backup transmitter via the radiomatic® iLOG key. If, for example, the crane number has been stored in the iLOG the operator can immediately see which crane the spare transmitter will operate. As such, micron 7 is a clever alternative even if there is no need for a feedback option.

And micron 7 has even more to offer:

- ✓ **10 push buttons + 2 rotary switches** = enormous range of functions!
- ✓ **User identification** = easy personalization of the radio control!
- ✓ **Vibration alarm** = efficient protection of the operator!
- ✓ **... and many more valuable extras!**

micron 7 **can be ordered immediately!** For more details, please see the enclosed information folder. With any questions we will be pleased to assist you by phone at +49 (0) 7951 393-0 or by e-mail at sales@radiomatic.com.

Kind regards,

Your HBC sales team
